

ViewAll® Software

ViewAll® is ImageWorks' proprietary, integrated software application that streamlines digital radiography by enabling users to acquire and view veterinary dental digital images in one step. With a DICOM 3.0 compatible file format and automated networked database connection, ViewAll® enables multiple users within the practice to access EVA Vet images, as well as referring veterinary practices or remote telemedicine. ViewAll has an easy-to-learn, veterinary-specific interface that includes a comprehensive breed list for dogs, cats and horses.

The integrated patient image database allows the veterinarian or technician to easily access existing patient studies or create new studies. ImageWorks' STAT Patient feature means fast and easy emergency image capture. With "DICOM Send", images are automatically exported with the free viewer for easy image sharing. With "DICOM Receive", other DICOM-compatible digital equipment can share images and patient data with ViewAll® effortlessly.

With standard tools for annotation, searching, and image manipulation, ViewAll is the complete and affordable solution for all dental and whole body x-ray imaging needs. ViewAll streamlines clinical efficiency by enabling users to acquire and view veterinary digital imaging data all in one step.

Whether you are just starting with a veterinary digital system or are adding on to your existing suite of ImageWorks products, ViewAll is the solution for you today, and for the future.

ViewAll® Features

Unified software for ImageWorks digital equipment – Train your staff on one application	STAT Patient mode for instant image acquisition
Patient Observation Series – allows you to capture and link a series of images over a 32-hour observation period	Image History – easily view or modify changes made to an image
Tabbed, user-friendly interface	Fully networkable and scalable for any size clinic or hospital
Easy integration with Veterinary Teleradiology and PACS with DICOM 3.0 Send tool– good for referrals, teaching and multiple practices	Acquire and view images on multiple monitors.
Using With DICOM 3.0 Receive, other DICOM-compatible digital equipment can share images and patient data with ViewAll® effortlessly	Easily transfer images between patients and from one owner to another
Pre-existing image layout templates can be modified to suit your workflow	Fine-tune the brightness, contrast and sharpness of any image
Right/Left position clarification marker	Add annotations to images as an overlay
Comprehensive breed list for dogs (over 250), cats (over 50), and horses (over 200) – add new species and breeds as needed	Image and patient information backup tool included (ImageWorks recommends that daily backups are performed)
Includes veterinary-specific language and GUI	Presentation Mode – show clients an image without the user interface
MS Word reporting templates included – easily add your logo and clinic information	View images in their anatomical position
Images and patient info always remain together – no more lost or misplaced x-rays	User-friendly search tool. Search by patient, image, client, or by case category
Get support hardware and software from ImageWorks – via phone, web or remote services (broadband connection recommended)	Easily compare images taken in different studies or at different times
Spanish Language Capability	Create patient-based PDF documents
